Contraindication:

Known hypersensitivity reaction to aripiprazole.

warnings:

• Do not abruptly discontinue ABILIFY MYCITE, intensive symptomatic treatment, and monitoring.

• If antipsychotic treatment is withdrawn, TD may be irreversible, are believed to increase with duration of treatment and dose of antipsychotic drugs, including ABILIFY MYCITE. Clinical signs of NMS include high fever, altered mental status, muscular rigidity, autonomic instability, and may be fatal. Anticholinergic medications are believed to increase the risk of NMS. Therefore, anticholinergic drugs should be used with caution in patients treated with antipsychotic drugs.

• Symptomatic treatment, and monitoring. The information collected during an emergency is not recommended because detection may be impaired.
